

## We make charging your EVs simple.

We believe we can accelerate EV uptake by maximising the benefits of EVs. The key to this is reducing the cost of energy.

EVOS' solutions focus on reducing the cost of energy for electric fleets by managing energy and simplifying the EV charging process.

We break down the barriers to convert your fleet to electric by simplifying and reducing the cost of installing and operating the EV charging infrastructure.

# EVOS helps you create your own private EV charging park for your EV fleet.

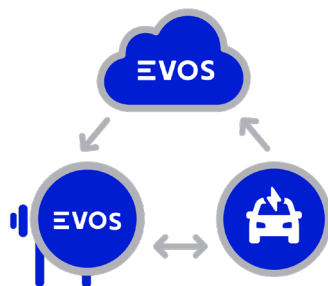

Our charging systems are designed to use cutting-edge technology to be safe, reliable and easy to repair, while offering a superior charging experience.

Our products are rigorously tested, rugged and built to withstand the heavy demands of fleet use. EVOS designs

and manufactures its EV charging products in Australia to deliver quality, performance and innovation.

## EVOS Smart Start

The Smart Start system provides a simple way of managing charging of electric vehicles without the need for the use of RFID tags, smartphone apps or fuel cards.

- Only allows authorised cars to utilise the asset. Locks out the public.
- Allocate details of the energy used to a connected vehicle account for user invoicing.
- Dynamic load management
- Tariff management
- Schedule charging

## Fleet Home 22

Up to 22kW AC charger for the home or workplace. The EVOS Home Fleet22 can be installed as a single or three phase charger.

- Simple to install and uninstall
- Connected via 4G or Wi-Fi
- Swap the charge cable without the need of a technician
- Remote energy management 3 year warranty
- Australian made
